

CLASSROOM DESIGN GUIDE

FLEXIBLE SPACES FOR EVERY LEARNER

Today's students learn, develop, and connect in different ways—and at different paces. Classrooms that support Lecture, Group, and Blended learning styles help keep students engaged as instruction shifts throughout the day and across grade levels.

HON classroom spaces are designed using a flexible collection of furniture that accommodates each learning style. Within every age group, the same core set of products is easily reconfigured to facilitate focused instruction, collaboration, or versatile learning models. Layouts change, not products, and because every piece is built to last, each can be scaled appropriately to create comfortable, adaptable classrooms for elementary, middle, and high school environments.

LECTURE STYLE

Supports focused, front-of-room instruction where clarity and attention are key. Designed for structured teaching modules that require every student to see, hear, and engage—without distractions.

GROUP STYLE

Built for teamwork, collaboration, and active problem-solving. Flexible layouts encourage students to share ideas, explore concepts together, and learn from one another.

BLENDED STYLE

Combines teacher-led guidance with independent exploration to reach learners in different ways. A versatile approach suited to technology-rich classrooms and varied learning needs.

EARLY ELEMENTARY

In early elementary classrooms, learning works best when students can listen, move, and work together. Brief teacher-led instruction provides structure and clear direction, group activities build social and communication skills, and blended learning encourages movement, exploration, and hands-on engagement throughout the day.

MIDDLE SCHOOL

In middle school classrooms, learning works best when students can apply ideas, collaborate with peers, and make choices in how they learn. Teacher-led instruction provides clarity and direction, group activities strengthen problem-solving skills, and blended learning gives students opportunities to explore concepts, use technology, and take greater ownership of their development.

HIGH SCHOOL

In high school classrooms, learning works best when students have moments to think critically, collaborate, and work independently. Teacher-led instruction introduces complex ideas, group activities encourage discussion and teamwork, and blended learning supports flexibility, self-direction, and real-world application.
