Smith System's new upholstered
furniture for outdoor learning
spaces.**

Flowform® Outdoor Bean Bench

Flowform® Outdoor Straight Bench

Soft and durable, Flowform® Outdoor pieces blend comfort with functionality. The fun, loose-fit designs provide just enough structure to keep students focused, yet still relax into nature's lessons.

Learning Comes Naturally

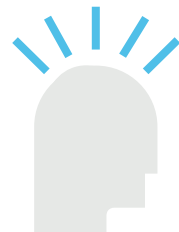

Humans crave connecting with the great outdoors. It's called biophilia, and it's why we bring nature into built environments, like schools. Studies show the biggest benefits occur when we bring students into nature. Even the smallest amounts of "Vitamin N" matter:

Health Regular contact with nature can improve students' physical health, mental wellbeing, and cognitive, social-emotional and motor functions.

Academics Research has long shown that natural light and exposure to green spaces boosts cognitive development.

Focus Outdoor learning is a multi-sensory experience with changing stimuli – different sights, sounds, smells and tactile opportunities. Each helps engage students and can even relieve attention disorders.

Fun Kids report liking school more when lessons are held outdoors. They're learning, but enjoying nature just for the joy of it.

Create Fluid Study Zones

Just like learning, furniture shouldn't be forced. Flowform® Outdoor is refreshing in that way. It features deliberate organic shapes with soft radii and rounded edging. The versatile benches, bench dividers, ottomans and stools work on nearly any manufactured surface, any outdoor ecosystem – urban and rural, from rooftop gardens to outdoor amphitheaters.

- Individual study
- Small group collaboration
- Large group gatherings
- Entire grade levels

Built to Last Nature's Wrath

Flowform® Outdoor furniture is designed and built to withstand years of rough weather and rough housing:

- Strong, yet light-weight, internal framing structure safely supports larger students.
- Sunbrella® Elements fabric is stain-, fade- and weather-resistant, and easy to clean with soap and water.
- For stability, Flowform® Outdoor should be bolted and secured to a man-made surface.

Meet the Lineup

Flowform Outdoor® furniture features soft radii and rounded edging, with no attempt to force pieces to interlock. They work individually or loosely slide together.

Behind the Design

Our design team includes Roger Carr and David Williams of Radar Design, London, the gurus behind many of Smith System's most popular products, and our new Flowform product line.

“Learning spaces are not as organized as we think. They are living environments. Students want to feel slightly contained, with the freedom to change things up. Flowform works with, not against, a student's internal compass.”

-Roger Carr
